- Skills: React JS and Redux JS, HTML 5, CSS, ES6, JavaScript, Bootstrap, Material.Ui, Express, Mongo DB, Node.js etc.
- Worked on the Agile Scrum
- Extensive knowledge and experience in all stages of the Software Development beginning from initiation and definition to deployment and support.
- Working experience in JSON, GitHub, Visual Studio Code, Postman.
- Ability to deliver a quality product on time and ability to work on challenging environment
- Open for new technologies, challenges and quickly able to adapt new environments.
- Deliver the product on given time

Project Details

Project 1 || Internet Banking

Role: Software Engineer

Description: React-JS and a few integrated libraries were used to build this project from the ground up. My area of responsibility mostly dealt with transaction-related matters. Internet and business banking were served by this effort. Features including internal bank transfers, international wire transfers, recharges, bill desk services, etc. were offered.

Responsibility:

- UI development by using React JS with React Hooks, MySQL
- Managing application-level state by using Redux and Redux hooks
- Responsive web design by using React Bootstrap, HTML5, CSS3

RELEVANT SKILLS

React.js

Redux

Material Ui

Mongo DB

Node.js

Express

JavaScript

ES6

HTML

CSS

Postman

Github

- Highly complex components designing by using React with minimum usage of third party NPM packages
- Designing and using dynamic and reusable components
- Implementation of connectivity with API services by using axios or fetch
- Pushing and pulling code to GitHub repo Develop branch
- Design and develop static or dynamic components based on the requirements from product owner.

Project 2 || Vehicle Tracking

Role: Software Engineer

Description: The main objective is to provide real-time information services for fleet tracking and maintenance. Location tracking, alerts for excessive speeding and idling, and vehicle health (engine overheating, low battery, etc.) are just a few of the services available.

Responsibility:

- Full Stack development using MERN stack
- UI Development: React JS with Material UI
- Creating reusable component.
- Creating functional UI by using unique wireframe.
- Axios: used for API integration from React JS
- Development of React component by using Functional Components.
- Backend: For backend created with Node JS and Express.
- Backend: CRUD API development - GET POST API development
- Backend: Integration with Mongo DB using Mongoose
- Mongo DB: Develop the Databases and Collection

Project 3|| Movies Web App

Role: Software Engineer

Description: There are two modules in this movie application: Admin and User. A manager may sign in. It has the ability to add and remove movies. He or she can also see user data and comments. The user may peruse the library's collection of movies after logging in and download those that catch his or her attention. Downloading movies is simple. You are welcome to post a movie review.

Responsibility:

- UI Development: React JS with Material UI
- Managing application-level state by using Redux and Redux Hooks
- Developing and designing RESTful services and APIs.
- Development of React component by using Functional Components.
- Responsive web design by using React Bootstrap, Material Ui, HTML5, CSS3.
