Salesforce Developer & Administrator (April 2018 - Present)
- **Internship at Schneider Electric** (0.6 Year)

PROJECTS

Project 01	Custom Activity Chart
Role	Salesforce Developer
Project Description	The Client is leading CRM & Cloud solution provider with clients across USA & India. They are building product which includes this component on record pages. Basically, Chart Lightning component is used to show graphs for activities. It also used to show the recently modified details along with their type i.e. (call, Email, Meeting, Other). One of the important features of this component is that it shows all tasks grouped by their types; the users wouldn't be required to check type of each activity manually.
Roles & Responsibilities	<ul style="list-style-type: none">• Design & Development of Aura Components to display data.• Worked on Apex Classes, Triggers, SOQL & Manipulating records with DML.• Worked on Test Classes.

Project 02	Rosario Invoice Processing
Role	Salesforce Developer
Project Description	Custom application developed for a leading Food industry where the Salesforce Application enables the Country stations in Argentina to get the invoices from the vendors along with the PO details. Application developed has an invoice record which gets created whenever the vendors which are majorly transporters and farmers send invoice attachment files via email. Invoice record is created in Salesforce along with the multiple attachments. The various different teams like the Analysis, Certification, Payment and Settlement teams will process the invoice based on the logic and validations built in the application.
Roles & Responsibilities	<ul style="list-style-type: none">• Design & Development of Aura and LWC Components to display data.• Worked on Apex Classes, Triggers, SOQL & Manipulating records with DML.• Worked on standard objects and custom objects, fields, validation rules, formula fields.• Worked on Profiles, users, field level security.• Worked on creating email service for creating invoice records.• Worked on Test Classes.

Project 03	General Payment Invoice Processing
Role	Salesforce Developer
Project Description	The client is one of the top companies of goods supplier across the globe. They wanted to build an application to process invoice records of grains transport. The invoices were being raised by the vendors as PDF through an email. The tool used to capture such invoices coming from email and then getting processed through several teams and their approvals. The processing of invoice was also involved daily upload of purchase orders from an excel file directly in the visualforce pages to match the invoices with respective purchase orders.
Roles & Responsibilities	<ul style="list-style-type: none"> • Development of Visualforce Pages including Pagination, Branding Headers, Footers. • Writing of Apex Classes for managing huge number of records. • Writing of Email Service for creation of invoices through email. • Created Workflow rules for sending email notifications. • Managing of different views in visual force for the teams on the basis of Queues.

Project 04	Survey Implementation
Role	Salesforce Developer
Project Description	The client is one of the top companies of goods supplier across the globe. They wanted to build a portal for submitting the surveys for the cases which are resolved in the organization. This will include the survey expiration functionality as well as survey will not get submitted twice. The survey will be triggered once the staff assigned to the case marked the case as resolved. After the resolution the client will get notified through email and after clicking on the link from the email it will be redirected to the survey portal. It will also include the language translation.
Roles & Responsibilities	<ul style="list-style-type: none"> • Development of Visualforce Pages including Pagination, Branding Headers, Footers. • Created workflows for sending email notifications. • User access management by using security model. • Managing the language translation using custom labels. • Created reports and dashboards for survey submitted and total survey triggered.
Tools	Aside.io, Workbench

Project 05	Chatbot Integration with Salesforce.
Role	Salesforce Developer
Project Description	The client is one of the top companies of goods supplier across the globe. They wanted to submit queries through chatbot widget which is deployed on share-point portal. This will include the various functionality like change status from chatbot i.e. resolve to closed/ resolved to re-open, fetch submitted queries list, fetch details about particular query, attached attachment through chatbot widget, fetch Survey link in chat widget.

Roles & Responsibilities	<ul style="list-style-type: none"> • Development Rest Context API for various functionalities like Submitting and fetching queries, changing status etc. • Created connected App for authentication. • User access management using security model.
Tools	Visual Studio, Change Set
