Testing Tools	: -	**POSTMAN, JIRA, AEM**
IDE	: -	Eclipse
Others	: -	MS Excel, Word, Power Point

Project Summary

1)

Project Name	Easy Trade
Domain	Investment Banking
Client	Easy Markets, UK
Testing Methodology	Functional Testing, Database Testing, Automation Testing and API Testing

Project Description:

Easy Markets is constantly researching and developing ways to offer you the best trading experience possible. This includes giving you access to multiple ways to trade: CFDs, Options, Forwards and the innovative Easy Trade. Easy Markets most innovative trading product yet for Equity, derivative, Future and Option. Easy Trade allows to trade without margin requirements, with zero spreads and known maximum risk, that's defined by the trader. Easy Trade also allows to perform a trade in three simple steps with the advantage of no margin requirements, no need for stop-loss. Forget being closed out of a position because of margin stop-out. Stop-loss is also not needed since your risk is already predefined and locked in. Easy Trade provides independent financial restructuring advice to companies, creditors, shareholders, and other stakeholders, both in and out of court. The company specializes in providing advice to clients on complex balance sheet issues and transformational situations.

Responsibilities:

- Understand the User Stories and requirement analysis.
- Prepare the Test Scenarios and Test Cases.
- Identify the test cases for Automation.
- Generating Regression Test scripts by extracting the requirements that need to be tested from available documentation
- Developed Automation Test Scripts.
- Creating POM (page object model) and Test classes for the framework.
- Extracting all the defects from QC and identifying the open, retested, fixed and new defects.
- Identification of defects, registering them in JIRA and reporting them to the onsite lead.
- Performing Functional Testing, Regression Testing and Re-Testing.
- Validation of Expected output vs Actual Output in respective logs files using UNIX.
- Validation of Expected output vs Actual output in respective database tables Using SQL.
- Preparing transition document for other team members.
- Active participation in weekly status calls with the client.

2)

Project Name	Canadiantire
Domain	Ecommerce
Client	NOTRE MAGASIN, CANADA.
Testing Methodology	Functional Testing, Database Testing, Automation Testing and API Testing

Project Description:

With the diversity of its brands, the Canadian Tire e-commerce site sells a wide range of automotive, hardware, sports and leisure, home products, toys, and food products to a wide range of consumers.

The objective of this project is to create e commerce web portal with content management system which would allow product information to be updated securely using mobile devices. The web portal will have an online interface in the form of e commerce website that will allow users to buy goods from the merchants.

Responsibilities:

- Gathered test data requirements for data conditioning from business units to test total application functionality.
- Interacted with SME'S (Subject Mater Expertise) to better understanding of the application functionality.
- Involved in writing detailed test Strategy and Test Plan documents as well as develop Test Cases through Quality Center.
- Involved in all phases and stages of software testing life cycle including System Testing.
- Created test scenarios for system testing and regression testing.
- Prepared test cases for positive and negative scenarios against requirements matrix.
- Extensively wrote SQL queries for backend testing of all test cases and validated data accuracy for various functionalities of project.
- Performed Authorization of various test cases for sanity testing and functional testing.
- Used data driven framework for automation.
- Created and re-used functions from function library.
- Used JIRA to track defects and attended meetings with developers in resolving the same.
- Executed test cases before and after bug fixes for each build for User Acceptance Testing.
- interacted with developers regarding priority & update the status of bugs once they are fixed.
- Functional Walkthrough & Peer Reviews of test scenarios and test plans among the team.
