- Sending customer, project data to Cherwell system

Report Generation

Few reports are developed using suitelet script as per requirements

Title: Foods and Beverages Industry

SUITESCRIPTS Used: Scheduled, User event, Suitelet, Client Scripts, Restlet, MAP-Reduced, and Workflow

Description

Loyalty Program :

After the creation of invoice customer gets some loyalty points and that points he can be redeemed after the return period are over for the next invoice. so basically earning points and validation on redemption points this development is done using the scripts Invoice Staging Interface

- On the basis of some validation create error record if there is no error then show order fulfill button

- When user click on order fulfill Button then item fulfillment is created by a script if a sales order status is pending billing then Create Invoice button is shown
- When a user clicks on Create Invoice Button then the invoice is created by a script.

Auto Number:

- set auto Number that documents a number of transactions on the basis of the given format by script.

Bulk Invoice Staging Interface:

- One UI is designed for this development some filter on the basis of the selected filter list of the Sales order is shown with a checkbox for further process like 1. Item Fulfillment for multiple location 2. The invoice with some custom logic

Tax Bifurcation Development :

- Calculation of tax bifurcation for a discount item and other charge item is done using the script as japan is implementing 2 taxes 8% and 10% tax

Send Email Automation :

- One UI is designed on the click of "Send Email" when user fill all the details and click on send email then email is sent to the respective recipient

Invoice Adjustment Through JV Offset

Title: Slot Service Management

SUITESCRIPTS Used: Scheduled, User event, Suitelet, Client Scripts.

Description

- one scheduled script is developed to create 32 slot records for each technician this scheduled script run daily basis.
- user select appointment date based on date in background we check whether the technician is free for the same or not and based on that slot is shown in green color if slot is not free then slot is shown in red color - after that on case and order booking record I created "Booking " button call center agent click on that button then order is got book and we calculate the travel time require for technician and case handling time based on that we update the slot record.
- I use Google travel time calculation integration

Title: Service Industry

SUITESCRIPTS Used: Scheduled, User event, Suitelet, Client Scripts.

Description

1. Developed one UI on which user will upload the CSV File which is in pre-formatted style. Then click on the button create SO then in backend sales orders are created and invoice are transformed from respective salesorder.
2. Done the Integration NetSuite-Zendesk-NetSuite (NL Authentication):
 - when contact is created/updated/deleted in NetSuite same contact is created/updated /deleted in Zendesk vice versa
 - when case is created/updated/deleted in NetSuite same case(tickets) is created/updated/deleted in Zendesk and vice versa.

3. also done the CSV Import

Title: Medical Industry

SUITESCRIPTS Used: User event, Client Scripts.

Description

1. GST Development:

- on the basis of place supply and customer location which tax is suitable for particular line item that is decided by script I use client script for the same and use one custom record tax determination record.
- same script is deployed on sales order, purchase order and invoice record.
- for GST Development i design PDF Layout for Invoice GST Invoice using advance PDF Layout.
- customized GST development for Transfer Order
- I develop One custom plug-in for adding Custom GL Impacts Line On Transfer Order Record - Design PDF Layout for Transfer Order (advance PDF Layout).

Title: Job Card

SUITESCRIPTS Used: User event, Suitelet, Client Scripts.

Description

Design one UI on which executive fill the details regarding device purchase date, customer name etc. based on purchase date in backend we calculate whether that device is in-warranty or out-off warranty then based on one estimate is created and inventory adjustment is done.

after repairing the device, we transform invoice from estimate record and do the inventory adjustment.

Title: Information Technology Industry

SUITESCRIPTS Used: Scheduled, User event, Suitelet, Client Scripts.

Description

1. Quarterly Commission Report:

- design one UI where user select from date and to date and click on the button "create" then in background I done the processing like using the more than two search , Search on Payment custom record, Vendor bill and expense report and then do comparisons and then I create excel file with given format as given by client and send that file to user via email.
- done some customization like sourcing customer and GBU from project record on Journal Entry record. - two custom filed on employee record 1. employee status and employee release on if employee is inactive and having the release date, I have developed one scheduled script which do the calculation like if current date - release date if answer is 45 or greater than 45 then script do the inactivate the employee and set standard release/Termination date.

Title: Information Technology Industry

SUITESCRIPTS Used: User event 2.0, Suitelet, Client Scripts.

Description

- 1.Design 5 different PDF Layouts by using suitelet scripts
- 2.Design 5 different Excel Files by using suitelet scripts
- 3.Done some customization: auto populate some fields on item fulfilment record from item receipt record.

EDUCATIONAL QUALIFICATION

- 2010-2014: **Bachelors of Engineering in Computer** from AAEMF's COE Koregaon Bhima, Pune, University of Pune with **62.33%** and 54.37% Aggregate.
