WORK EXPERIENCE

Project #1 emClick and emSign Click Tool for certificate Download in eMudhra Limited

Current Role & Responsibilities: The emSignClick and emClick is a multiplatform web Application used for Certificate Creation and Download . The application is based on Cryptography techniques based on Base64 and SHA256 encryption. Designing of windows application using MFC and in Linux using GTKMM.

Project #2 Monitoring performance of Transport Manager and Planner-JDA Client

Current Role & Responsibilities: The AppDynamics is an APM (Application Performance Monitoring tool). As my application belongs to supply chain domain, hence there are multiple processes involved to complete a business transaction. The challenge is to track the performance of the module during the IPC. The AppDynamics portal (Controller) shows the lots of features to manage the application performance.

- Instrumented the AppDynamics C++ SDK along with enhancement of the application.
- Incorporated the AppDynamics features in Angular JS based infrastructure for monitoring purpose.
