📁 Projects

1.Conversation View

Conversation View is one to one messaging tool it is developed in LWC and can be used on any record page to send and receive messages

2.Job Aids Post

We designed aura components in file structure to post job and fetch data every time from third party server and store there if uploaded from Salesforce components.

3.Loan Management App

Designed and developed Loan force Application to manage the loan for customers and designed data model and integrate with server to receive and update the update values from Salesforce and vice versa.

4.JSW Steel

JSW Steel for JSW Steel designed component and from where managers and users can control the sales for each individual from single portal. In this mobile application was designed and showing complete data in form of chart for each month of sales.

5.SSO With Okta

This project requires single sign on setup with OKTA so we do setup up for SSO with salesforce and OKTA.

6.Encryption Decryption

Create web service class for receiving data and we encrypt data by crypto classes and also do decryption and return the expected result.

7.Exide

Exide for Exide create portal to controlling sales order and managing the orders from single portal from where user can provide discount and can control their sales.

8.Multi Conversation View

MCV is the view from where the user can reply to multiple incomings messages at one time

9.Messaging From Bulk

We have designed components by which we can send messages from Campaign and Report to the bulk of records to there multiple Phone Api in a single click

10.Sales Process Management

Create a Process for Lead Assignment in Round Robin Manner to the different -different stakeholders and there reportingsin the hierarchy

11.Integration With WhatsApp

We did integration with WhatsApp to message to User's registered Whatsapp from Salesforce
